Whether or not you use our Cloud Mining or your own hardware, you can mine any cryptocurrency, regardless if it is based on a SHA-256 or Scrypt algorithm Let your computer relax.. What is this? The diff change is the rate at which the network difficulty is changing every month.. Our Cloud solution will mine and hash whatever cryptocurrency you need Get started with as little as \$10 with immediate mining results.

How is this calculated? Time to break-even is calculated by comparing your hardware cost (which you must enter below) to your predicted monthly profits and seeing how long until the initial hardware cost is paid off.. For smaller coins the diff change can sometimes be inaccurate due to a wildly fluctuating difficulty.. The Break-Even Analysis feature can help you predict how long it will take to become profitable for a given setup.. Crypto Mining Tools Of some typical GPU GTX 750 Ti GTX 1060 GTX 1070 Mining Most used mining pools for zcash are CoinMine.
